Utter Bag

Direct To ROOT "Target Watering"™

Best Tree Root Establishment and Water Conservation Practice

Advanced Utter Bag saves up to 70% water in comparison to the 20 gallon tree water bags, by slowly channeling 100% of the irrigation 'directly' to the tree roots. Precious water lost to mulch cover absorption, run off and evaporation is 100% eliminated.

-Installs in 15 seconds, then fill with 7 gallons of water.

-Install around trees up to 2" in caliper. For larger trees, zip two Utter Bags together
