

# ROOT FLOW

## IRRIGATION & LANDSCAPE PRODUCTS

**DELIVERS**

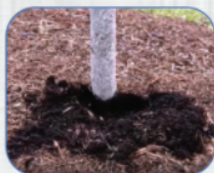

**Without**

Channeling WATER, OXYGEN, and NUTRIENTS into the soil promotes deep roots and beautiful trees

Common landscape barriers prevent water, oxygen & nutrients from naturally penetrating to the roots resulting in lack luster trees, shrubs & plants and short life expectancies.

compacted soil

water absorbing mulch

weed barrier sheet

slop water runoff

Proven in millions of installations and studies:  
Channel water, oxygen & nutrients directly into the roots and see a beautiful world of difference

Landscape Model

Large for trees  
Small for shrubs, plants & gardens

Channel rain and sprinkler water directly into the roots

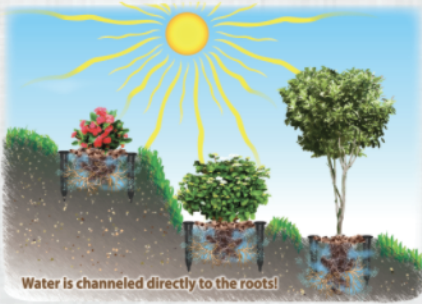

Irrigation System Model

Enclose a bubbler, emitter, or drip line below the top cap

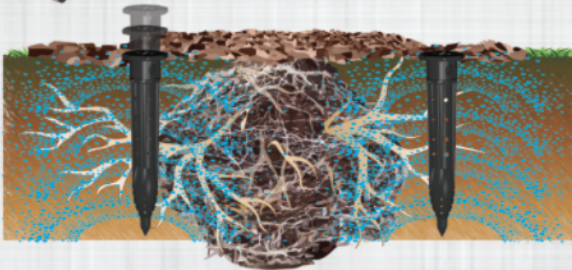

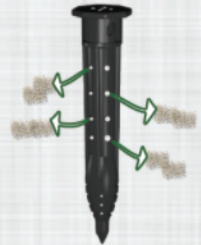

Best plant healthcare & water conservation practices, subsurface irrigating deep roots requires 70% less water use in comparison to surface irrigating.

Installs in Seconds

SOLD SEPARATELY

All Natural Nutrition Tablets with Beneficial Bacteria

1. Reduce Stress & Plant Loss
2. Promote Water & Nutrient Uptake
3. Promote Root Regeneration and Recovery

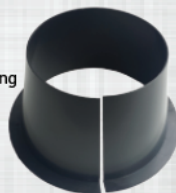

**Applications: (1)New tree and shrub planting (2) Tree and shrub restoration/maintenance (3) nursery and planters.**

**Download Root Flow landscape drawing details and specifications at [www.RootFlowProducts.com](http://www.RootFlowProducts.com)**

# Tree Shield

Protects the trunks of newly planted trees

Patent Pending

## Bark damage kills trees / Tree Shield protects trees

Tree Shield protects against trunk rot and decay by maintaining a 2-inch separation between blankets of wet mulch and the base of trees.

Mulch provides many tree benefits. However, mulch absorbs rain and sprinkler water. Blankets of wet mulch resting against young tree trunks rot the bark at the base, often killing unestablished, newly planted trees.

## Utter Bag

Direct To ROOT™ Target Watering™

Advanced Utter Bag saves up to 70% water in comparison to the 20 gallon tree water bags, by slowly channeling 100% of the irrigation directly to the tree roots. Precious water lost to mulch cover absorption, run off and evaporation is 100% eliminated.
